Chalford Ceiling Dryer Assembly Instructions

1. Fix the 2 half rings (A) securely to your ceiling, ideally into a strong beam
2. Set these two fixings 95cm apart and ensure that you add 1 x metal ring (B) to each half ring before securing into the ceiling.
3. Thread the longer length of rope through the furthest hoop first then the nearer one.
4. Thread the shorter length of rope only through the near hoop and then hoist the ceiling dryer using both ropes into the optimum drying height out of harm's way
5. Once you have established the correct height for the dryer, fix the wall cleat (C) in a suitable position and tie the 2 ropes together allowing them to loop over the cleat and sit securely
6. You can also tie another lower knot in the ropes to secure the dryer in a lower position as you place your clothes on for drying
